

Motion and proximity sensor - 100 cm 12V / 10A

Application

the sensor is designed to be installed inside buildings
it is used for automatic switching on of lighting in cooperation with intelligent RESTAN controllers (MONO-1, RGB-01, RGBW-R)
precisely detects all objects located in front of the sensor up to 100 cm
precisely detects all moving objects in front of the sensor up to 100cm
internal timer, twilight sensor and 10A relay allows the sensor to be used independently as a detection and control device for on / off systems

Functions and parameters

adjustable detection range 30-100cm
back-up time adjustment 1s-120s
regulation of operation depending on the intensity of external light
detection angle 1 degree
12V power supply
maximum load of the sensor contacts 10A

NOTE: Mechanical damage to the potentiometer is not subject to warranty repair
