End cap Profile LED POLI

Price	1.18 Euro
Availability	Available
Shipping time	4 days
Number	1735
Manufacturer	KLUS

Product description

SMOOTH CONTROL OF BEAM DIRECTION

MOUNTING IN HARD TO ACCESS INSTALLATION LOCATIONS

The POLI system is designed to illuminate niches and slots in suspended ceilings and walls, offering an option of smooth control of lighting beam direction. A major advantage of this system is the possibility of mounting in locations hardly accessible to mounting tools.

The POLI system consists of the POLI profile and suitable fasteners. The POLI profile is snapped to the fastener. The hook in this fastener is designed in such a way that one can set it to the pre-set beam direction.

POLI fasteners are made of polystyrene which allows them to be glued to different surfaces by means of the majority of assembly adhesives available on the market. They can also be painted, e.g. color of the substrate.

The control of the light beam angle can be performed within a range of 90 degrees. This profile comes with standard HS, K, KA-BIS, and LIGER covers, as well as pale gray POLI end caps.
