Milight bulbs are points of light have different functions, including the main form interior lighting and decorations. Manufacturer deliberately created his light source so that you can use widely available in the lamps holes for screwing light bulbs - their handles are made in the most popular sizes.

Similarly constructed bulb is proposed on this site - the thread size is GU10. 2in1 is a type of light bulbs. No additional drivers and integrate with other devices in the system, is a classic bulb. However, in the context of Milight it is a point of light intelligent and meets all modern standards. With remote control can change the intensity of the light, the color and mode of operation. Luminous flux is a variant of RGB and / or warm or cold white.

For Milight lamps may be grouped and it does not matter the number in the group. Assigns them to the controller using the remote control, just remove it. Group may be all the points the light in the room, only light at their desk, or just hanging lamp - there is full freedom.

GU10 thread fits many night lights and other lighting products of this type. Suitable for wall lights, lower ceilings, as lighting, to create a welcoming atmosphere, whether as a colored accent light in the interior, especially impressive after dark.

As with all LED light points created within the brand Milight, its durability is estimated at 50 thousand. burning hours, which in practice gives even 25 years of a fully satisfactory environmental lighting product.
