## LED driver - the fearless rider effect super LED 28

Price	<b>38.55 Euro</b>
Availability	<b>On order</b>
Shipping time	<b>5 days</b>
Number	<b>285</b>
Manufacturer	<b>RESTAN</b>

### Product description

The driver of the fearless-rider effect. The results are obtained for 28 channels (ledach). The driver is a type of effect. The controller can be used for example in car tuning, etc. Power supply voltage is in the range of 9 to 14V (typically 12V). Outputs can be connected to any of the LEDs (forward voltage in the range of 1.5 V to 4V, practically all types). The supply voltage is closely related to the number of LEDs connected in series on the channel and conduction voltage LEDs. For one channel (output) Connect one LED. If you will connect more LEDs in series to decrease the brightness of these diodes. The controller is designed for typical LEDs with a current of about 20mA.

#### CONCLUSION:

- 1) the effect of super realized until the 28 channels (ledach)
- 2) the possibility of connecting any (standard) LEDs. The LEDs should get their own
- 3) standard for a controller connected to 28 LEDs, but more can and
- 4) small size 5.5 cm x 7.5 cm
- 5) compact
- 6) speed change effects by mounting potentiometer
- 7) the effect of a close to the Fearless - see a movie at the top of the auction description quick installation. You just plug in the power and lights. LEDs can be combined with the driver even at several meters lines and thereby gain any length and shape of the proposed effect.
- 8) Good price / performance ratio
