Product description

Sconce Moderno line Elisse SKOFF is created on the basis of the rectangle bent into the shape of an arc / semicircle. When the aluminum surface is an LED module and above them is a rectangular transparent glass module convex in the same way as part of the aluminum. The uniqueness of a combination of these noble materials manifests itself in subtle, but fully eye-catching appearance. This prestigious product to the apartments, modern offices, and impressive bedroom. Successfully also delight visitors luxury hotels. Height is 64,8cm Width - 15,6cm and depth - 9cm.

Lighting evolving. Currently, in addition to practical function, or even being just a cool gadget, the lighting has to intrigue, attract attention. The proposal Elisse has a lot of extravagance and remains simple and elegant, in a way complementing decor. On the other hand - his real advantage shows when ignited lights. Then he begins to understand why the designer thought about that and not another appearance.

It is energy efficient - power consumption is only 11W. The color of light emission is a standard for LED lighting heat or cool white. It is also important that appropriately advanced technology avoids the phenomenon of so-called. glare. The light beam is pleasing on the eye and lights up the room as requested by the designer and then you. IP20 qualifies him for the interior, where there is no risk of damage. In this delicacy but all his charm!
