### Product description

Introducing the RGB LED light controller. The controller is an integral part of the RGB system. With it you can achieve the desired color of light, or choose one of the many available features dynamic color changes. RGB Drivers available at our auctions are characterized by the highest quality of workmanship, compliance with the specified parameters, ease of use and reliability. With the included pilot to the controller you can control your lights without leaving your chair. Infrared communication between controller and pilot will control it from up to 15 meters. The controller is designed to work with any source of RGB LED lighting powered from 12V DC to 24V not exceeding the total current of 9A (3A per channel). RGB Controller is used mostly for working with RGB LED flexible strip. Lets bring out the full range of LED strips available in shades of monochrome LED strips. With dynamic color changes will allow you to achieve stunning light effects at the touch of a button on the remote.
