Product description

If you like the assumptions of smart home and would like to introduce similar measures at home, be sure to check our proposals components Milight. One practical WiFi router Milight iBox2.

This device for many functions, it can easily be used as a controller and thus control the lighting throughout the home using WiFi. It appreciated the proposal of this type, because it is it allows easy handling, for example, the intensity of light in any room. This solution is an excellent option for business owners who depend on modern approach to the look of their offices.

The router of this type works with a range of lighting devices, which include filament RGB, RGBW, or, for example LED strip. This allows you to freely develop their own system of intelligent lighting. Free application that allows control of individual light points, is available on the AppStore and Google Play, and is called MI LIGHT. You can set four independent zones of lighting, and if necessary, there may be even more.

Small router is discreet and certainly will not throw it in the eye. Its purchase is not a necessary element of the system is used Milight, but certainly it will be very practical and will extend the functionality of the entire lighting system. Be sure to find out how convenient it is to control the lighting in your home staying out of it. It's a real solution of the XXI century, that love not only fans of technological innovations.
