- * Kit is suitable for self-assembly (very easy to install.)
- * Driver made us in POLAND with high quality components, which gives almost guarantees a lifelong activity.
- * For each controller add guarantees, instructions and a description of the assembly.

Possible modifications to the individual - by a separate valuation

The intelligent lighting controller proposed on this page supports the illumination of 16 stairs, but it is not the only area which can manage. Along with additional appliances, such as sensors, power amplifier and remote control, gives countless opportunities. Each project with his participation will be energy efficient because of the technology - led module controller supports LED light source (strips, bindings ...).

It has a number of advanced settings. For example stairs. You can manage the movement of the landing. There are a dozen light outputs of 12V - quantitative adjustment to the number of points of light. Besides, you can set the time of lighting or light extinction. Mode of operation at stand-by mode, by inflammation of the outermost points, or all, after setting the brightness of that light emitted. Our favorite feature is the ability of the stair controller to control the concurrent traffic from opposite directions, eg. When users enter the same time up the stairs and descend down.

We recommend the Polish stair controller. It is easy to install and easy to use. This ensures an almost lifelong effect due to the high quality durable materials from which it was built.

The controller is the starting point for the development of an interesting and functional lighting in the home and outside. In

our shop we offer lighting kits. However, due to the experience and consciousness of individuality of each client we as counselors and also guarantee the price modification in relation to needs.
